Voluntary GA* Scheme

Background

At present, the Water Supplies Department (WSD) has a General Acceptance (GA) system in place to pre-approve plumbing products used in plumbing projects. The current GA* Scheme is a <u>voluntary scheme</u> built on the existing GA System. The scheme promotes adoption of low metal leaching rate metallic plumbing products in fresh water inside service application. Suppliers, manufacturers and importers of GA plumbing products are encouraged to join the Scheme to introduce low metal leaching rate metallic plumbing products to the local market.

Scope

GA plumbing products (excluding products for non-potable fresh water system, flushing water system and fire service system) that fulfill the requirements of low metal leaching rate on the metallic surfaces in direct contact with fresh water will be classified as low metal leaching rate metallic plumbing products under the **GA*** Scheme. Currently, **GA** products accepted for **GA*** application include pipes and pipe fittings (stainless steel, copper or copper alloy), valves, strainers, expansion/settlement/flexible joints, taps and mixers.

Assessment

- 1. A prerequisite requirement for **GA*** application is that the plumbing product shall possess a valid **GA** status.
- 2. Low metal leaching rate metallic plumbing products under the GA* Scheme shall possess supporting document/test report to prove compliance with an Australian/New Zealand Standard AS/NZS 4020:2005 Appendix H or I at a testing temperature (20±2)°C. The maximum allowable concentration of heavy metals of the extracts shall comply with the World Health Organization's guideline values and/or provisional guideline values as shown in the table below.

Metal	Maximum Allowable Concentration, μg/L		
Lead (Pb)	10		
Cadmium (Cd)	3		
Chromium (Cr)	50		
Nickel (Ni)	70		
Copper (Cu)	2,000		
Antimony (Sb)	20		

- 3. **GA*** Scheme accepts test reports issued by accredited laboratories under the Hong Kong Laboratory Accreditation Scheme (HOKLAS) in the same category/sub-categories as for GA application or test reports recognised under the mutual recognition arrangement (MRA) with HOKLAS for the relevant test (note the requirement of Scaling Factor in clause 6.
- 4. For a particular model of plumbing product designed with different connection size/diameter, compliant metal leaching test conducted on the smallest size/diameter fitting is sufficed for the whole range of size/diameter of that model of plumbing product as stated in the GA letter. For example, compliant test of a diameter 25mm copper bend will validate bends of the same model at diameter 25mm or above for the GA* status. However, for copper bend of the same model with diameter below 25mm would not be covered.
- 5. As stated in AS/NZS 4020:2005, any product, or part of a product, installed within 250 mL draw-off of a drinking water delivery point will be classified as "end-of-line fitting" and shall comply with the extraction-of-metals procedure for testing in Appendix I of the Standard. Procedure for testing "in-line" fittings is given in Appendix H. In brief, taps and mixers are "end-of-line fitting" whereas "in-line" fittings would include pipes, pipe fittings, valves etc. The approved laboratories would advise the applicants on the tests required for different plumbing products.
- 6. In accordance with Appendix H of AS/NZS 4020:2005 for "in-line" products, the result of heavy metal concentrations from test shall be multiplied by the corresponding Scaling Factors, before checking against the table on the maximum allowable concentration in Clause 2 for compliance. However, there is no Scaling Factor for "end-of-line fitting" in Appendix I of the Standard. The WSD has adopted the following Scaling Factors for "in-line" fittings used in the Hong Kong situation:

In-line Metallic Plumbing Product	Scaling Factor		
Pipe	Nil		
Pipe fitting	0.05		
Valves (Gate, Globe & Ball)	0.01		
Butterfly valve	0.05		
Non-return/Check valve, Pressure	0.01 for DN=>100		
reducing valve	0.05 for DN<100		
Strainer	0.1		
Expansion/Settlement/Flexible Joint	0.01		

As the Scaling Factors adopted by the WSD for "in-line" products may not be the same as the Scaling Factors used overseas, for test reports issued by laboratories under the mutual recognition arrangement (MRA) with HOKLAS, adjustment on the final metal concentration by using the Scaling Factor above may be necessary before acceptance of the products by the WSD.

7. For **GA*** application purpose, valid test reports shall be issued no more than three years from the date of **GA*** application.

Publication of GA* Result

After acceptance of application by the WSD, the GA* information of the GA product will be updated to the Directory Search of the WSD website for GA products.
